

Sarah Chen

Senior Backend Engineer | Jakarta, Indonesia
sarah.chen@example.com | +62 811 5550 0142 | github.com/example-schen

SUMMARY

Backend engineer with 6 years building and operating high-traffic APIs. Owned services handling 50,000+ daily active users at peak. Focused on Node.js, Go, and Postgres, with deep experience in queueing, caching, and observability.

EXPERIENCE

Senior Backend Engineer Tokopedia-scale marketplace (fictional co.), 2023 - Present

- ¢ Own the order-processing service handling 50,000+ daily active users and ~2M requests/day; cut p95 latency from 840ms to 210ms by adding Redis read-through caching and fixing N+1 queries.
- ¢ Designed an idempotent, DB-backed job queue processing 400k jobs/day; brought failed-job rate from 3.1% to 0.2% with bounded retries and dead-letter handling.
- ¢ Led migration from a single Postgres instance to primary + 2 read replicas with zero downtime.
- ¢ Mentor 4 engineers; run the on-call rotation and postmortem process.

Backend Engineer Fintech payments startup (fictional co.), 2020 - 2023

- ¢ Built the payments reconciliation pipeline serving 15,000+ monthly active merchants; processed ~IDR 40B/month in transaction volume.
- ¢ Introduced structured logging and tracing; reduced mean time to diagnose incidents from ~45min to ~8min.
- ¢ Wrote the Stripe and Midtrans webhook handlers, including signature verification and event-id idempotency.

SKILLS

Languages: Go, TypeScript/Node.js, Python, SQL
Data: PostgreSQL, Redis, ClickHouse, Kafka
Infra: Docker, Kubernetes, Terraform, AWS (ECS, RDS, S3), GitHub Actions

EDUCATION

B.Sc. Computer Science Universitas Indonesia, 2020
